

Statement

Nurses are expected to be “prepared to practice from an evidence base; promote safe, quality patient care; use clinical/critical reasoning to address simple to complex situations; assume accountability for one’s own and delegated nursing care” (AACN, 2021).

SARS-CoV-2 is a potentially deadly virus. Providing misinformation to the public regarding masking, vaccines, medications and/or COVID-19 threatens public health. Misinformation, which is not grounded in science and is not supported by the CDC and FDA, can lead to illness, possibly death, and may prolong the pandemic. It is an expectation of the U.S. boards of nursing, the profession, and the public that nurses uphold the truth, the principles of the Code of Ethics for Nurses (ANA, 2015) and highest scientific standards when disseminating information about COVID-19 or any other health-related condition or situation.

When identifying themselves by their profession, nurses are professionally accountable for the information they provide to the public. Any nurse who violates their state nurse practice act or threatens the health and safety of the public through the dissemination of misleading or incorrect information pertaining to COVID-19, vaccine or well-being of the public, but may place their license and career in jeopardy as well.
